Experience

[NASA Ames Research Center, National Aeronautics and Space Administration](#) MOUNTAIN VIEW, CA
Distributed Spacecraft Autonomy (DSA) *July '20 – present*

The DSA project will advance command and control methodologies for controlling a swarm of spacecraft as a single entity, demonstrate autonomous coordination between multiple spacecraft in the swarm, and demonstrate approaches for adaptive reconfiguration of the swarm's plan and distributed decision-making across a swarm of spacecraft.

Autonomous Systems Perception for Urban Air Mobility *July '20 – July '21*
Developing Computer Vision algorithms for object detection, tracking, autonomous decision making, and 3D reconstruction.

Subtopic Manager, Neuromorphic Computing *June '22 – present*
Assisting with and managing SBIR and STTR solicitations regarding Neuromorphic computing, processing, and manufacturing.

[University of Georgia Small Satellite Research Laboratory](#) ATHENS, GA
Thesis: High Performance Computation with Small Satellites and Small Satellite Swarms for 3D Reconstruction *January '18 – May 2020*

Here I focus on the design and usage of computer systems in small satellites. The custom computer vision library SSRLCV is developed. The Nvidia TX2i GPU accelerated SoC is modified for use in a Cube Satellite. Results show accurate 3D reconstruction of the surface of Earth feasible within 15 to 100 meters.

Co-Founder, Program Manager, Systems Engineer *January '16 – May 2020*
The University of Georgia Small Satellite Research Laboratory (UGA SSRL) was founded when I decided to form a team to build a small 1U cube satellite. The UGA SSRL now includes over 40 undergraduate researchers, 5 graduate students, several faculty researchers, a space act agreement with NASA Ames, a partnership with the Air Force Research Laboratory (AFRL), and more.

6U CubeSat - MOCI *January '16 – present*
The Multiview Onboard Computational Imager (MOCI) is a 6U cube satellite funded by the Air Force Research Laboratory's (AFRL) University Program (UNP) NS-9. The MOCI satellite shall use advanced computer vision algorithms and specialized computational hardware, based off of the Nvidia TX2i GPU/SoC, to generate 3D digital surface models of the earth in real time. The MOCI satellite is scheduled for handoff in Q2 of 2020.

3U CubeSat - SPOC *January '16 – present*
The Spectral Ocean Color (SPOC) satellite is a 3U cube satellite funded by NASA's Undergraduate Student Instrument Project (USIP) and was selected for NASA's Cube Satellite Launch Initiative (CSLI) for a handoff in Q4 of 2019. The SPOC satellite shall use a custom hyperspectral sensor to analyze the coastal ecosystems of the Georgia coast.

[NASA, National Aeronautics and Space Administration](#) HOUSTON, TX
Core Flight Software Programmer *April '15 – August '15*

I helped develop Core Flight Software (CFS) to handle audio telemetry and communication for the Orion spacecraft in a simulated lab setting. I also worked in an audio lab with embedded systems for audio equipment.

Human Systems Integration *April '15 – August '15*
While working in the Human Integrated Vehicles and Environments (HIVE) Lab I assisted with internal telemetry systems and general networking systems throughout Johnson Space Center. These systems were needed for future Graphic User Interfaces (GUIs) used while training astronauts.

Hodgson Glass Research Laboratory

ATHENS, GA

Undergraduate Researcher

August '14 – April '15

I assisted Dr. Johnson Turner with technical advice and programmed/designed environments for digital music systems.

Google Glass Development

August '14 – April '15

I helped develop the first [musical score viewing application](#) for Google Glass. This application was used in concert across multiple Google Glass units.

Smart Podium Development

August '14 – April '15

I developed a digital smart podium for the use of a band director. The goal was to allow synchronized music editing and notation.

The Home Depot Innovation Center

ATLANTA, GA

Research & Development Intern

April '14 – August '14

I worked as a software developer intern at The Home Depot's Innovation Center. I was part of the Center's first group of interns and helped to justify its existence within the company.

Google Glass Research & Development

April '14 – August '14

I developed an Augmented Reality Google Glass application using a low level OpenCV libraries and data structures. The goal was to assist with product recognition, allow for barcode scanning, and quick product searches.

Virtual Reality Research & Development

April '14 – August '14

I developed a Virtual Reality application with Google Cardboard using low level OpenCV libraries and data structures. The goal was to display heat maps of various product data over store shelves to assist with product placement.

Research

Thesis: ; Paper: ; Conference Presentation: ; Conference Poster: 

A Hardware Accelerated Computer Vision Library for 3D Reconstruction Onboard Small Satellites

IEEE Aerospace Conference - *Best Paper in Track*

Big Sky MT, 2021

Caleb Adams, Jackson Parker, David Cotten

Design and Testing of Autonomous Distributed Space Systems

The AIAA/Utah State Small Satellite Conference - Small Sat

Logan UT, 2021

Nicholas Cramer, Daniel Cellucci, Caleb Adams, Adam Sweet, Mohammad Hejase, Jeremy Frank

High Performance Computation with Small Satellites and Small Satellite Swarms for 3D Reconstruction

Master's Thesis - The University of Georgia

Athens GA, 2020

Caleb Adams, Committee: Dr. Ramviyas Parasuraman, Dr. David Cotten, Dr. Michael E. Cotterell, Dr. WenZhan Song

The Spectral Ocean Color Imager (SPOC) - An Adjustable Multispectral Imager

The AIAA/Utah State Small Satellite Conference - Small Sat

Logan UT, 2019

David L Cotten, Nicholas Neel, Deepak Mishra, Marguerite Madden, Caleb Adams, Susanne Ullrich, Adrian Burd, Malcolm Adams, Kaitlyn Summey, Casper Versteeg, Jackson Parker, Fred Beyette

Towards an Integrated GPU Accelerated SoC as a Flight Computer for Small Satellites

IEEE Aerospace Conference

Big Sky MT, 2019

Caleb Adams, Allen Spain, Jackson Parker, Matthew Hevert, James Roach, David Cotten

Towards an Integrated GPU Accelerated SoC as a Flight Computer for Small Satellites

IEEE Aerospace Conference

Big Sky MT, 2019

Caleb Adams, Allen Spain, Jackson Parker, Matthew Hevert, James Roach, David Cotten

Selected Software Demonstrations from the Multiview Onboard Computational Imager Satellite

Space Innovations Symposium

Atlanta GA, 2018

Caleb Adams, Jackson Parker

GPU Accelerated SoCs as Flight Computers for Small Satellites

Space Innovations Symposium

Atlanta GA, 2018

Caleb Adams, Allen Spain, Jackson Parker, David L. Cotten

What are Cubesats? A look at UGA Space Exploration

UGA Physics and Astronomy Colloquium - Invited Speaker

Athens GA, 2018

Grants Funded

UNP NS-9, Phase B

University Nanosatellite Program, Nano-Sat 9 Phase B – \$600,000

2018

The Air Force Research Lab's Nano Satellite Program funded the UGA SSRL, as the winner of phase A, \$600,000 to build and operate the MOCI satellite.

UGA: CTL

The Design and Construction of Equipment for Ground to Space Communications – \$23,586

2017

An internally awarded by the Center for Teaching and Learning for the construction of a space ready ground station at UGA.

UGA: Parents Leadership Council

Providing Undergraduate Students Equipment for Ground to Space Communications – \$5,000

2017

An internally awarded by the Parents Leadership Council to help obtain ground support equipment for the Small Satellite Research Lab.

NASA USIP

The NASA Undergraduate Student Instrument Project – \$200,000

2016

The NASA Undergraduate Student Instrument Project funded the UGA SSRL \$200,000 for the design, construction, and launch of the SPOC satellite.

UNP NS-9, Phase A

University Nanosatellite Program, Nano-Sat 9 Phase A – \$180,000

2016

The Air Force Research Lab's Nano Satellite Program funded the UGA SSRL for \$180,000 to design and prove the mission architecture for the MOCI satellite.

*Grants listed above have me listed as an **author**, significant contributor, and/or essential personnel.*

Awards, Honors & Fellowships

Georgia Space Grant Consortium

Fellowship

2018

I was selected to receive a fellowship from the Georgia Space Grant Consortium. I was awarded 10k in total funding, this was used to further develop the UGA SSRL's high performance processing units.

UNP Phase B

Phase A Winner

2018

The MOCI satellite was selected as the winner of the 9th iteration of the University Nanosatellite Program, selected first out of 10 competing programs, and awarded over \$600,000 dollars in phase B funding.

TEDx UGA

TEDx UGA Student Idea Showcase

2016

I was selected as a presenter at TEDx UGA's student idea showcase. I spoke about the importance of space exploration, citizen science, and the democratization of space with small satellites.

HackGT

Top 8

2016

I led a team that won top 8 at Georgia Tech's Major League Hacking (MLH) Hackathon. We built a drone from scratch that planted seeds. We were selected among 500 of our peers.

NASA Johnson EV3

Team Excellence

2015

While working at NASA's Johnson Space Center I was awarded for going above and beyond requirements by staying late nights, and over night, to perform thermal vacuum tests on a payload.

VT Hacks

Winner

2015

I lead a team that won Virginia Tech's 2015 Major League Hacking (MLH) Hackathon. We built a remote operated telescope and competed with 1000 of our peers.

Leadership Experience

UGA Small Satellite Research Laboratory

ATHENS, GA

Co-Founder, Program Manager

2016 – 2020

With two of my friends, I created the foundations of the UGA SSRL. I have since lead it to receive almost a million dollars in funding as it constructs UGA's first satellites.

-
- Space Innovations Symposium ATLANTA, GA
Session Chair, Organizer 2019
I helped organize the 3rd Space Innovations Symposium in Atlanta Georgia at Georgia Tech, where I chaired a session of the symposium. I also helped by getting students and organizations in the Athens area to attend the symposium.
- Head TA - CS 1302 Software Programming ATHENS, GA
Head TA 2018 – 2020
The CS 1302 class at UGA is when most Computer Science students first experience significant programming. It takes them from simple terminal applications to complex GUI-based applications with large codebases. I manage a team of about 10 other TAs (varies by semester) who help run this class of 300+ students. I manage grading criteria, rubrics, coding projects, auto-grading systems, and hold office hours to help students understand the subject.
- Hyve Robotics and AstroVisual ATHENS, GA
Co-Founder 2015 – 2018
I Co-Founded two companies, Hyve Robotics and AstroVisual. AstroVisual began by selling smart-phone enabled telescopes for astrophotography. AstroVisual ceased operation when its members founded the UGA Small Satellite Research Laboratory. Hyve robotics created food delivery robots and was acquired by Cosmic Delivery in Q1 2018.
- UGA Hacks ATHENS, GA
Co-Founder 2015 – 2016
With two of my friends, I helped to create UGA's official Major League Hacking (MLH) Hackathon program, which still exists today. The organization helps get Computer Science students excited about programming by presenting them with difficult, relevant challenges.
- UGA Redcoat Band ATHENS, GA
Section Leader 2014 – 2015
I led the UGA Redcoat Band's trombone section. I helped organize events, conduit rehearsals, arrange and teach music.
